

TSL: COMPANY PROFILE

WHO WE ARE

Trina Solar Limited (TSL) is an internationally recognized manufacturer of mono and multicrystalline photovoltaic (PV) modules and has a long history as a solar PV pioneer since it was founded in 1997 as a system installation company in China. Our high-quality PV modules provide clean and reliable solar electric power to on-grid and off-grid residential, commercial, industrial and utility scale applications around the world. With local sales and marketing offices as well as installation partners throughout Asia, Europe and North-America, Trina Solar is committed to improving the competitiveness and efficiency of solar energy and developing a sustainable PV industry.

Trina Solar celebrated its 10th year Anniversary on April 22, 2008 in China with more than 800 guests from all over the world. The achievements of the last decade have laid a solid foundation for Trina's accelerated growth, and the global alternative energy development potential ensures Trina Solar an even brighter future. The company will continue to be dedicated to innovation, quality and improved efficiencies as it pursues grid parity to expand the global solar PV industry.

WHAT WE DO

Trina Solar produces and commercializes a wide variety of photovoltaics (PV) modules, both monocrystalline and multicrystalline, with power outputs ranging from 165W to 230W. Adapting our product range to meet market demands allow us to provide our customers with a broader range of solutions.

Trina Solar research, development and manufacturing of ingots, wafers, cells and solar modules are conducted at its facilities in Changzhou, China, where Trina Solar occupies a site of approximately 152,526 square meters. Trina Solar's ongoing expansion plans include adding approximately 161,475 square meters to its existing facilities to increase its production capacity. With this phase of expansion, expected to be complete by 2010, Trina Solar expects to increase our total annual production capacity from ingots to solar modules to 350 MW by the end of 2008 to 700 MW for cells and modules and 500 for ingots and wafers by the end of 2009.

Trina Solar sells and markets its products in number of European countries, such as Germany, Spain, Italy, Netherland, France, and Belgium, where government incentives have accelerated the adoption of solar power. Trina Solar also targets in emerging PV markets such as France, the United States, South Korea, India, Australia, China and Mongolia. Trina Solar sells its products to distributors, wholesalers and PV system integrators around the globe.

Trina Solar's increasingly global presence includes offices in China, Germany, Spain and the United States, as well as a team of local sales managers in key countries in Europe and Asia to provide our customers with timely and professional service. In addition to this, Trina Solar also offers after-sales technical service support to its Asian, European and North American customers

Trina Solar has long-term partnerships with leading equipment suppliers in Switzerland, Italy, Germany and the United States who provide cutting edge equipment with the latest technology for our high-end production facilities. These partnerships are another quality guarantee for our customers and enable us to continue to provide clean, reliable solar energy solutions for your future.

In mid 2006, Trina Solar received investment from a number of internationally recognized investors including Milestones Capital, Good Energies and Merrill Lynch. These investments served as the starting point for the company's globalization and were vital to ensure brand expansion. The listing in the New York Stock Exchange (NYSE) in December 2006 and the subsequent follow-on stock offering in June 2007 and convertible bond in July 2008 have allowed Trina Solar to successfully execute its expansion plans, guarantee a rapid increase of production capacity and ensure procurement of raw materials. At the same time, the listing in the NYSE and support of international investors has allowed the company to attract talent from around the world. Today, Trina Solar has a team with employees from over a dozen nations with significant PV industry experience, who contribute each day to the success of the company.

Trina Solar net revenues have increased rapidly in recent years. In 2007, Trina Solar net revenues were \$301.8 million compared to \$114.5 million in 2006. Trina Solar net revenues increased primarily due to our increased sales and manufacturing capacity as demand for our products remained strong. In addition, Trina Solar recorded net income from continuing operations of \$35.4 million in 2007 compared to net income of \$13.2 million in 2006.

HOW WE DO IT

Trina Solar has successfully developed into a leader in the PV industry based on its strong, vertically integrated business model, producing its own ingots, wafers, cells and modules in-house. The control and efficiency achieved from this integrated value chain helps to continuously improve the production process as well as ensure high quality products to our end customers. This commitment to quality is one of the cornerstones of our long-term partnerships. As we are committed to improving efficiencies and competitiveness, we also look to partner with downstream companies who share those same values, working together to bring solar PV mainstream.

MISSION STATEMENT

Our mission is to continue to help expand the global solar energy industry to make solar power a clean, reliable energy source for everyone.

VISION STATEMENT

Our vision is to become the global leader in manufacturing high quality and cost effective solar PV modules that will provide clean, reliable, grid-competitive electric power around the world.

CORE VALUES

Trina Solar has established a culture with a set of core values that help define how the company does business and pursues its mission. The Trina Solar team applies these values everyday and they serve as the foundation for interactions with customers, suppliers and business partners. Trina Solar embraces these core values as essential in achieving the long term goal of becoming one of the leading vertically integrated companies in the solar PV industry.

Integrity: At the core of Trina Solar's values is integrity. The company firmly maintains the highest standards of integrity in all of its business relationships and works with international business partners who share this view.

Quality: Trina Solar adheres to international quality standards and institutes stringent quality control processes in its operations. The company strives to consistently deliver high quality products to the market.

Accountability: Trina Solar's team embodies a strong sense of professionalism and accountability. The company seeks to build strong relationships with partners who share a commitment to growing the solar PV industry.

Innovation: Since 1997, Trina Solar has invested in research and development initiatives and continues to emphasize its technological development. Trina Solar seeks to collaborate with long-term partners who can help to develop and invest in evolving technologies and bring these innovations to the market.

Teamwork: Teamwork is a key component of Trina Solar's success. The company has built a team of highly qualified individuals who share this philosophy of teamwork. This notion of teamwork extends from the management team down to each Trina Solar employee and also extends to our customers, suppliers, partners and investors who seek to strengthen the solar PV industry as a whole.

Passion: The success of Trina Solar is driven by employees who are enthusiastic about our business model and our mission. The team seeks to translate such energy into stronger relationships with customers, suppliers and partners. Passion and enthusiasm will continue to fuel the development of Trina Solar.

COMPANY IDENTITY

The name 'Trina' is a transliteration of the original Chinese name 天合 (TianHe). 天 means 'sky' or 'heavens' and 合 means 'combine harmoniously'. The blue of the Trina Solar logo represents the sky while the red dot represents the vast energy of the sun. This is exactly what we do at Trina Solar: utilize advanced photovoltaic technology to bring the sky's most abundant resource, the sun, to customers around the world in the form of clean, reliable solar electricity.
